

Introduction of the LightweightEnvironmentTemplate

What is the lightweighted environment template?

It is the project source for reference which can be utilized when developing Web systems such as home page, business system, and portal site, and it is basically configured by selecting a part of functions of common component. Project can simply be generated with wizard function provided by Eclipse development environment, and test driving can be performed with servlet engine such as Tomcat after creating required table with included DB script.

Function configuration of the lightweighted environment template

Basic functions of the lightweighted environment template are configured by selecting basic functions from common component for each table, and it is comprised of the menu structure in which the menu with the form of example is included in order to be furnished with the appearance of general system (For the function corresponded to the example menu, only the screen view with the form of html is provided.).

Home page template is configured with the form of project after borrowing schedule management (department schedule) as basic function. Internal business template is configured by borrowing with the emphasis on internal system management function, and the portal site template is configured by borrowing with the priority on the functions related with communication such as questionnaire, FAQ, etc. The lightweighted environment template source is changed to suit to each template project as the common component source used for the basic configuration has been customized. If the function with the form of original version of common component is to be used, it shall be re-configured with the wizard which assembles the common component source provided by Development Tool.

Type of template	Basic function (Function borrowing & customizing)	Remarks
Home page	Bulletin board management, schedule management (department schedule)	Menu, additional configuration of administrator login
