

Check Box

The check box provides a function to select more than one item.

Base Code

To arrange the check boxes vertically, enclose the check boxes with `<fieldset data-role="controlgroup">`. To make the checked box as default, add `checked="checked"` to `<input type="checkbox">` tag.

Select Hobby:

Music listening

Movie viewing

```
<fieldset data-role="controlgroup">
```

```
  <legend>Select Hobby:</legend>
```

```
  <input type="checkbox" name="checkbox-1" id="checkbox-1" class="custom" />
```

```
  <label for="checkbox-1">Music listening</label>
```

```
  <input type="checkbox" name="checkbox-2" id="checkbox-2" class="custom"
  checked="checked"/>
```

```
  <label for="checkbox-2">Movie viewing</label>
```

```
</fieldset>
```

Shape Change

The check boxes can be grouped horizontally. To do so, add **`data-type="horizontal"`** to `<fieldset data-role="controlgroup">` tag of the base code.

Select Hobby:

Music listening

Movie viewing

```
<div data-role="fieldcontain">
```

```
  <fieldset data-role="controlgroup" data-type="horizontal">
```

```
    <legend>Select Hobby:</legend>
```

```
    <input type="checkbox" name="checkbox-1" id="checkbox-1" class="custom" />
```

```
    <label for="checkbox-1">Music listening</label>
```

```
    <input type="checkbox" name="checkbox-2" id="checkbox-2" class="custom" />
```

```
    <label for="checkbox-2">Movie viewing</label>
```

```
  </fieldset>
```

```
</div>
```

Refresh

The check box can use refresh function. Add the following code to JavaScript and connect it to an event, the checked box is unchecked.

Select Hobby:

Music listening

Movie viewing

[refresh](#)

```
$("#input[type='checkbox']").attr("checked",true).checkboxradio("refresh");
```
